

Devashish Nayak

Senior Software Engineer — Full-Stack (JavaScript, TypeScript, Node.js, NestJS)

Remote, India · devashishnayakrps@gmail.com · +91 98211 26935 · linkedin.com/in/devashish-nayak

Summary

Full-stack engineer with 5+ years shipping JavaScript/TypeScript products—React/Next.js UIs, NestJS/Node.js APIs, and real-time LMS surfaces. Currently building grounded LLM experiences (RAG, citation-backed chat) with human review in the loop. Promoted L2→L3 at GoEnglishX; owns architecture, API contracts, Core Web Vitals, and mentoring.

Skills

Backend JavaScript, TypeScript, Node.js, NestJS, Express, REST, GraphQL, MongoDB, SQL

Frontend React, Next.js, Zustand, Tailwind, Material UI, Electron, Storybook, WebRTC

Real-time WebSockets (rooms, presence, reconnect), Zoom Meeting SDK, GraphQL BFF

AI / LLM OpenAI & Anthropic APIs, RAG, streaming chat UX, grounded UI, Cursor / Claude

Quality Core Web Vitals, code splitting, Jest, Cypress, GitHub Actions, ARIA, SEO

Experience

Senior Software Engineer (L3) | Esuhai — LMS AI

Jul 2025 – Apr 2026

GoEnglishX Education Pvt. Ltd., Remote — JavaScript, TypeScript, React, Next.js, Node.js, NestJS

- Own the LMS AI assistant for teachers and learners: streaming chat, content suggestions, and citation-style grounding in React/TypeScript, with NestJS/Node.js model APIs, retry fallbacks, and human review before publish.
- Designed RAG over course/FAQ corpora (chunk → embed → retrieve → answer) on a NestJS service layer; evals and sign-off so ungrounded output cannot ship.
- Built a teacher review queue (accept / edit / reject) so suggested content never publishes without an explicit action.
- Wired citation chips in the chat UI so answers link back to the retrieved course/FAQ chunk the model used.
- Standardized Cursor/Claude scaffolding, prompt templates, and PR gates so AI-authored TypeScript still requires human review.

Software Development Engineer (L2) | NativeX — Live Class & LMS

Apr 2023 – Jun 2025

GoEnglishX Education Pvt. Ltd., Remote — JavaScript, TypeScript, React, Next.js, Node.js, NestJS

- Led live-class architecture (Zoom Electron SDK, WebRTC—join, media, reconnect) and a Storybook design system (100+ components) across Admin and LMS, cutting feature delivery by ~40%.
- Re-architected the live-class surface for stability; shipped 40+ Admin/LMS surfaces; code-splitting cut initial JS by ~28% and improved loads by ~30%.
- Owned LMS chat (WebSocket rooms, presence, MongoDB), a NestJS/Express GraphQL BFF, and Zustand media/chat state; hardened the Electron teacher client (retry, reconnect) and API contracts.
- Built a frontend perf dashboard (LCP, load time, bundle size) and brought live-class LCP from ~4.1s to ~2.3s; mentored juniors on TypeScript and reviews.
- Added Jest/Cypress coverage for live-class join and chat reconnect; raised a11y/SEO on LMS surfaces.
- Documented Storybook usage and a TypeScript review checklist so juniors could ship Admin pages without copying live-class internals.

Software Engineer (L1) | LMS Product & Internal Tools

Feb 2021 – Mar 2023

Topica Edtech Group, Remote — JavaScript, TypeScript, React, Next.js

- Shipped 25+ React/MUI LMS pages covering navigation, course discovery, detail, and cart/checkout used by learners.
- Delivered 10+ remediation dashboard pages (list, filter, detail) for internal tooling, plus shared search primitives (advanced search, chips, autocomplete).
- Extracted shared MUI primitives (tables, forms, dialogs, empty/error states) and standardized table/filter patterns so new screens reused one UI layer.
- Owned cart/checkout and course-detail API wiring—loading, validation, and failure states—so those journeys stayed consistent across the LMS.
- Implemented enrollment and cart persistence so learners could leave and resume checkout without losing state.
- Applied a shared MUI theme and responsive layouts so LMS and internal dashboards stayed consistent on desktop and tablet.

Awards

Smart India Hackathon 2020 (SIH) – Winner

Aug 2020

Ministry of MSME — led engineering on a scalable waste-management system (full-stack prototype, national finals).

Education

B.Tech, Computer Science — The NorthCap University

Aug 2017 – Jun 2021
